

## **CSC540: Demo Data**

Whatever be the specific schema of your database, populate it in such a way that the records you insert have all the information below. Other than this minimum required data that your database must contain, you can make up the rest of the values for other fields/records in your database. ***You are responsible for preloading this 'demo data' into your database before your demo date & time. The penalty for not doing so is at least 20% of your demo grade.***

If your application automatically generates permitID and driverID then adjust the following data accordingly since the goal of this demo data is not to change your application design.
